Hydro Massage System (Included with all Walk in Tubs)

The 30" x 52" features are hydro jets, perfectly placed for soothing, therapeutic relief. Fixed upper jets target your back, hips, and thighs, while adjustable lower jets provide a refreshing massage for your feet and calves. Number of jets depends on the tub model.

This system includes a hydro pump with an in-line water heater, an eco-friendly ozone sterilization system, and an intensity control dial to customize your massage experience. The in-line heater keeps the water comfortably warm throughout your bath, while the ozone system offers chemical-free sterilization, eliminating odors and ensuring a clean, hygienic soak.

Easily adjust massage intensity using the control dial, which regulates water pressure by blending air into the system, letting you enjoy anything from a gentle massage to a more invigorating experience.

- On/off push control
- Intensity dial air control
- Hydro massage pump
- Ozone sterilization
- In-line water heater

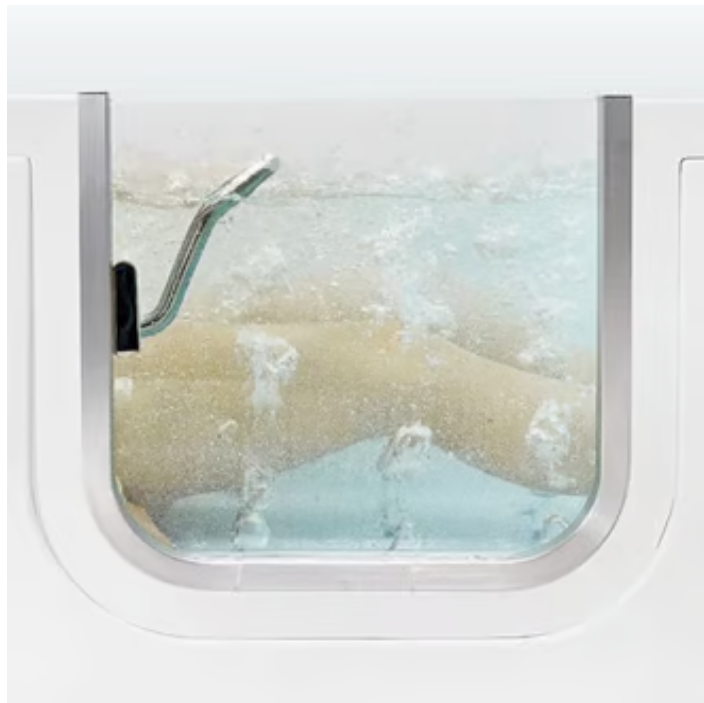

Air Massage System (Optional)

Add the Air Massage system to your walk-in tub for soothing therapeutic relief with sixteen (16) or seventeen (17) strategically positioned air jets (the number of jets depends on the model). Flat jets in the upper area target your back, hips, and thighs, while jets in the foot well provide a gentle massage for your feet and calves. Two of the upper jets function as bidet jets.

This air massage system features a 3-speed adjustable air pump for customized intensity and an automatic purge system for easy maintenance. The auto-purge activates 20 minutes after your bath, blowing out any remaining water and bacteria in the air lines. This 2-minute cycle helps keep the system clean, reducing moisture and preventing mildew.

- Gentle massage
- 3-speed pump
- Auto-purge
- On/off push control

Infusion™ MicroBubble Therapy (Optional)

Experience soothing, skin-renewing benefits of Infusion™ MicroBubble Therapy. This advanced system uses a single, high-pressure MicroBubble jet connected to a hydro pump and a specialized tank to create billions of tiny, oxygen-rich bubbles. With a push of a button, microbubbles fill the tub, creating a luxurious, milky bath that delivers deep hydration, gentle exfoliation, and powerful detoxification for skin health.

Gentle, Deep-Cleaning Power: The microbubbles penetrate pores, lifting away impurities and dead skin cells without the need for scrubbing. This leaves your skin feeling thoroughly clean, soft, and rejuvenated after every soak.

Oxygen-Rich Hydration: The microbubbles increase dissolved oxygen levels in the water by up to 50% compared to regular tap water, enhancing skin hydration. Studies show that a 10-minute soak can boost skin moisture by 14%, leaving skin visibly softer.

Temperature Retention for Endless Relaxation: As the microbubbles gently pop, they release energy that helps keep bathwater warm, even slightly increasing its temperature. This allows for a prolonged, cozy soak without the need to add extra hot water.

Velvety Soft Water Sensation: Unlike standard bathwater, the microbubbles create a uniquely silky texture, giving the water a velvety feel. This soothing sensation requires no oils or additives, offering a pure, chemical-free bath experience.

- Excellent for skin health
- 1 High pressure pump
- Agitator valve
- On/off push control

Independent Hydro Foot and Calf Massage (Optional)

Enhance your walk-in tub experience with the Independent Foot and Calf Massage package. This feature includes two dedicated pumps that operate independently, allowing for a relaxing full-body massage alongside a powerful foot and calf massage.

The hydro jets are positioned at both upper and lower levels, each powered by separate pumps. An adjustable intensity control dial lets you set the water pressure to your preferred level, whether you want a gentle flow or a deeper, more invigorating massage. Enjoy a rejuvenating foot and calf massage in minutes by simply filling the foot well up to seat level.

Please note: Tubs with this package come with an in-line water heater for the lower jets, and an ozone sterilization system linked to the upper jets.

- Run foot jets independently
- Second hydro massage pump
- Second Intensity dial air controls

Heated Seat & Back (Optional)

Stay cozy from the moment you enter your walk in tub with the Heated Seat & Backrest, available on all Freedom walk-in tubs. Heating cables are encased in a multi-layer mesh blanket, bonded together through a heat press process, providing mechanical strength and a lasting, durable design.

Advanced radiant heaters deliver soothing heat for ultimate comfort and relaxation, keeping you warm as the tub fills. With a simple on/off control, the heated seat and backrest activate in minutes, creating a cozy, spa-like experience designed for relaxation and well-being.

- Turn heated seat on 10 minutes before your bath for optimal comfort.
- Auto shut off after 20 minutes.
- Uses less energy than a standard light bulb

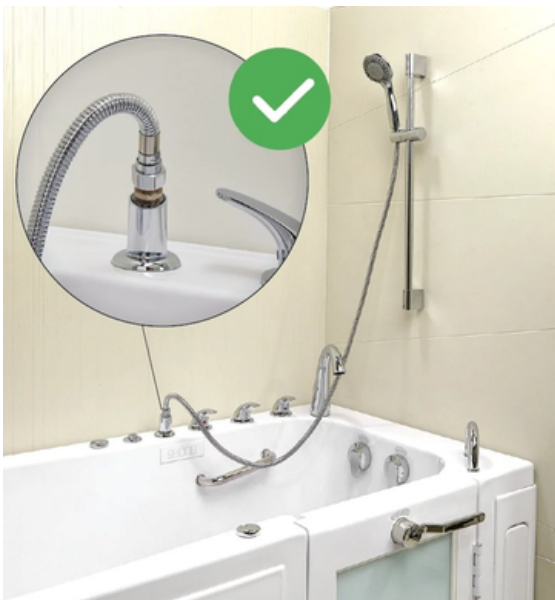

24" Hand Shower Slide Bar & Leak Elimination Kit (Optional)

Note: If you're planning to install a hand shower slider bar on the wall, this is a must-buy and must-install accessory to prevent leaks through the pull-out hand shower insertion hole.

This leak elimination kit includes a 24-inch stainless steel hand shower slide bar, a 5-foot braided stainless-steel shower hose, and a threaded coupling for easy attachment to an existing pull-out hand shower. Designed to prevent water leakage through the pull-out hand shower insert hole, this kit ensures a watertight seal that protects floors from water damage behind the walk-in tub.

The adjustable slide bar can be installed on any side or end wall, so you can secure the hand shower at the perfect height and angle. With its sleek chrome finish, the kit blends seamlessly into any bathroom design while adding convenient functionality.

- Prevents leaks from the pull-out hand shower insert hole
- Includes a 5-foot stainless steel hose and threaded coupling
- Easy wall installation with adjustable height and angle
- Chrome-finished slide bar for a stylish, durable look

10" Rain Shower Head & Shower Column Kit (Optional)

The Freedom Shower Column Kit adds a touch of luxury to your walk-in tub. The stainless steel, chrome finish column can be easily adjusted up to 7 feet tall. On the column is a vertically movable, 5-mode multi-functional hand shower. The oversized rain shower can be directed with ease to the seat for a seated shower or footwell for a stand-up shower. The column kit connects to a diverter on a Freedom brand 2 or 5-piece Deck Mounted Faucet.

This Freedom shower kit replaces the need for a wall-mounted shower head, allowing you to have a dual shower system that includes a luxurious overhead rain shower and a powerful handheld shower head.

2-way ON/OFF diverter (rain shower and hand shower), on the knob of the faucet. (They cannot be used at the same time).

A short or long pipe connector to mount the column to the wall. (Long pipe range between 9 3/4" to 10 3/4", can be installed with an extension panel/filler in an alcove installation. Short pipe range between 2 1/4" to 3 1/4", used when there is a gap between the center of the shower column and the wall).

- Stainless steel,
- chrome finish.
- Adjustable 10" rain shower head (rotates and pivots)
- Adjustable height and angle bracket for the hand shower.
(use the hand shower and hose that comes with the 2 or 5-piece faucet set.)

4-Fold Tempered Glass Shower Screen (Optional)

The 4-Fold Bath Screen is a one-of-a-kind product for walk-in bathtubs. The unique foldable feature of the screen can easily be pushed aside to give bathers an airy, open feeling. The lightweight glass, secured in an aluminum frame with quality gear hinges, is sturdy enough to endure rigorous daily use. Additionally, one of the 4-fold sections can be removed to create a 3-fold shower screen / bath screen.

The full-length flexible rubber gasket inserted on the bottom to ensure secure soft closure on the top of the deck and to retain the water back into the tub.

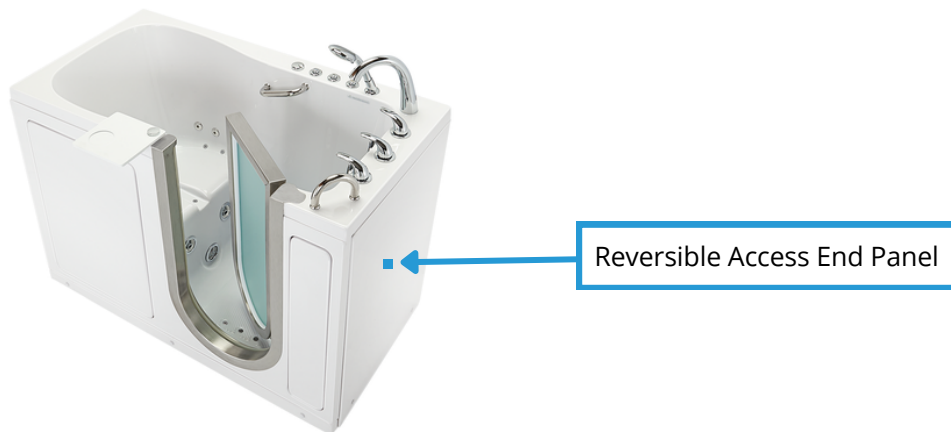

- Tempered clear glass, rustproof ionized aluminum frame in chrome finish,
- Durable PVC geared hinges,
- Rubber gasket angled inward for water retention and bottom seal
- Reversible left or right installation option of the door
- Four (4) panels fold from 44" to 12"

Reversible Access End Panel and Extension Panel

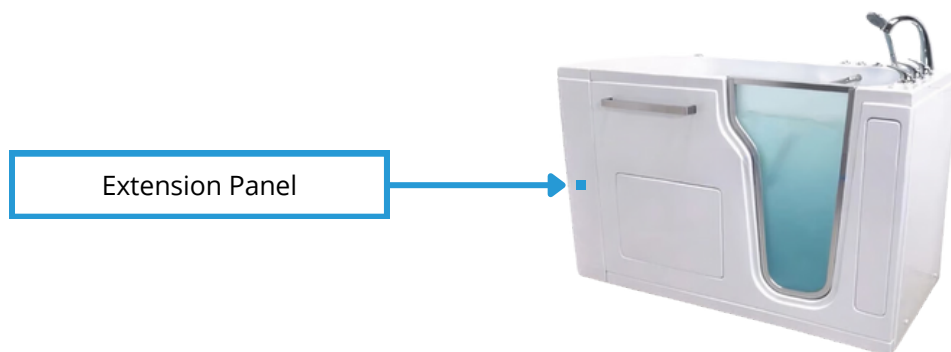

Reversible Access End Panel

Each Freedom walk-in tub comes with a reversible end panel that can be installed on either side of the tub. If you need to cover the other end of the walk-in tub, you can purchase an additional end panel separately. End panels are only necessary if one or both ends of your tub will be exposed and you want a finished look. Tubs that fit into an alcove won't need an end panel.

Extension Panel

All of our acrylic walk-in tubs come with one reversible extension panel, designed to extend the length of your tub to fill a 60" alcove. An extra extension panel is available for purchase. Extension panels help to hide the plumbing and mechanics inside, and can provide extra storage space at either end of your tub. Extension panels give you the option to install your bathtub in any bathroom.

Flexible Glue Up Tile Flange

The Freedom Glue-Up Tile Flange kit provides an ideal solution for our walk in bathtubs lacking a built-in tile flange. Freedom walk-in bathtubs don't include an integral flange to maximize interior space, so this flexible, glue-up tile flange kit is recommended for sealing gaps between the tub and surrounding tiles or wall panels. Made from a thin, waterproof Sealux membrane, this 4" wide flange is specially designed to prevent water seepage, safeguarding walls and floors from potential damage.

Each Tile Flange kit includes a 4" wide Sealux membrane roll with a 1 ¼" siliconized adhesive strip, a spreading spatula, alignment guide, and two alcohol cleaning tissues. The Sealux membrane creates a flexible, waterproof seal along the tub perimeter when paired with 100% silicone, which bonds effectively to both the tub and walls—even accommodating floor movement.

This patented system is easy to install and eliminates the need for bulky plastic flanges or messy butyl. Compact and affordable, it's ideal for installations where quality, efficiency, and durability are prioritized.

- Cost-effective, award-winning product with patented technology
- Flexible and waterproof, accommodates joint movement
- Mess-free installation—no plastic or butyl needed

Digital Controller

Available with any combination hydro and air jets, upgrade to a digital controller for a sleek panel with 5 to 6 illustrated buttons for a compact panel. If you order a heated seat with your Air and Hydro tub, there will be an additional button for the heated seat.
