

**1** Proprietary applied acrylic surface creates luxurious, durable shower pans and walls. Low porosity helps maintain luster and makes cleaning easier.

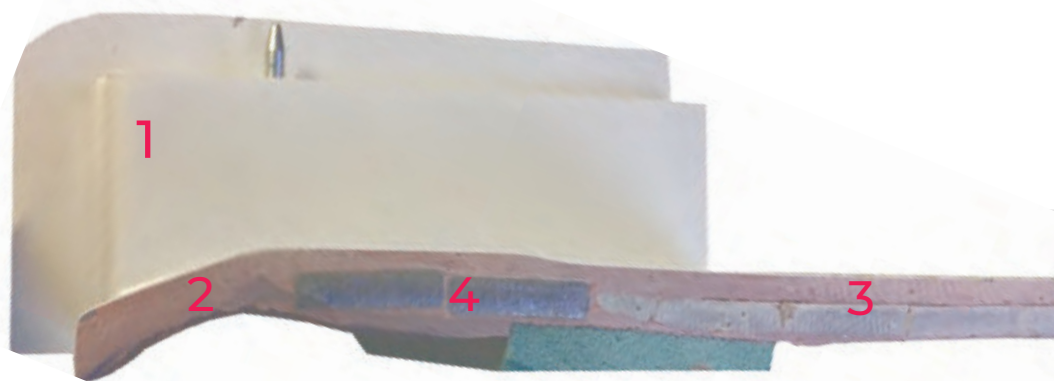

**2** Solid layer of Fiberglass resin cures to a strong, smooth shell.

**3** Resin reinforced product (RRP) utilized in the shower pan construction, it is impervious to moisture and outperforms traditional materials. The RRP chemically bonds to the fiberglass, providing unprecedented structural strength. This allows for the shower pan to be adhered directly to the subfloor and does not require foundation or bedding material for installation.

**4** Steel reinforcement rod, embedded into the threshold for unmatched strength and durability.

**5** Metal conduit around perimeter of each panel, for added strength.

**6** All wall panels are fully wood backed, this reinforcement makes the walls durable and able to support accessories without additional backing. Accessories can be installed anywhere, immediately or in the future.
