Care and Cleaning Instructions for Teak Wood Shower Seats

While teak is naturally resistant to bacteria and mildew, build up may still occur from soap residue, minerals or other impurities from your water. Therefore, the manufacturer strongly recommends performing routine cleanings each time you clean your shower or bathroom or when you notice some build-up. Remember that teak has a slip-resistant surface, but a soapy build-up can compromise this, so it is important to clean the surface regularly. To keep your teak looking new, we recommend a deep cleaning at least every 3 months or more depending on use.

NOTE: Do not use a power washer.

For a quick cleaning, simply apply water with a soft nylon bristle brush in the shower area and lightly scrub the teak until all the residue is removed. Then rinse the teak surface with clean water and wipe dry.

For a deep cleaning, we recommend a commercial teak cleaner to remove any mildew or discoloration. These cleaners won't strip the wood of its natural oils and non-slip characteristics.

Steps:

1. Apply the cleaning solution to your teak liberally and allow the cleaning solution 1-2 minutes working time to soak in
2. Next use a soft bristle brush to scrub the teak surface and loosen deeply imbedded soap scum and debris, then spray with clean water
3. If necessary, completely clean and disinfect several times.
4. Allow the teak to dry completely
5. Apply a fresh coat of clear teak oil or teak sealer to restore the wood's natural warmth and richness
